

Project 3: Scrollytelling

STAT 133, Spring 2026

About

The purpose of this assignment is to give you the opportunity to create a scrollytelling document—via *Closeread*—and also to put in practice the tidyverse tools that we’ve covered so far.

General Instructions

- Use a Quarto Document (`.qmd` file) for your Project 3. Please refer to the template files provided in lab 6 and in bCourses folder project3.
- Save this file as `project3.qmd`.
- You will have to Render your `qmd` file as a `closeread-html` document.
- You will also have to publish your document to **Netlify**. This was covered in lab 7.
- As usual, assume that your published story will be seen by a potential employer, boss, client/customer, admissions committee, or something like that. In other words, make sure that the content of your project is “understandable”: well organized, self descriptive, easy to follow, etc.
- To receive full credit, please submit the following to bCourses (proj3 assignment):
 - `qmd` file
 - HTML file
 - (URL) link to your Netlify published document.

1 Data

The data for this project involves some variables from NBA players during the regular season 2024-2025. The data set is available in bCourses (link below) in the CSV file `nba2025-clean.csv`

<https://bcourses.berkeley.edu/courses/1551809/files/folder/projects/project3>

Columns (variables):

- **player:** name of player
- **team:** 3-letter team abbreviation
- **position:** player's primary position
 - C: Center
 - PF: Power Forward
 - PG: Point Guard
 - SF: Small Forward
 - SG: Shooting Guard
- **height:** height in inches
- **weight:** weight in pounds
- **birth_date:** birth date (Month day, Year)
- **experience:** number of years playing in NBA
- **salary:** salary in dollars

Importing CSV file in a qmd file

You can use any reading-table function either from base R or from *tidyverse* package "`readr`".

Sample Closeroad Document

You can find a sample closeroad template file in bCourses

<https://bcourses.berkeley.edu/courses/1551809/files/folder/projects/project3>

2 Prompts

💡 Specs

The main goal in this project is to craft a story around **salaries of NBA players** and payrolls of NBA teams in season 2024-2025.

- All sticky elements (e.g. images, graphics, tables) should be accompanied by its corresponding narrative element.
- All plots have to be presentation-quality graphics: include a meaningful title (possible a subtitle), axes properly labeled, legible text, consistent theme, use of color with a purpose (not just purely decorative “eye candy”)
- Imagery: use of icons and imagery (e.g., photos, logos) is encouraged but not necessary.
- Optional: Visual effects (e.g., zoom-in, panning) are welcome but not necessary.

Your scrollytelling document should contain narrative, images, graphics, and tables that cover the following:

- 1) At least one graphic to visualize the salary distribution of all players.
- 2) A table or numeric output with summary statistics of salaries among all players (e.g., min, max, quartiles, measures of center, measures of spread).
- 3) At least one output (graphic / table) that displays the top-10 highest-paid players (name, team, position, salary).
- 4) At least one graphic that explores the relationship between salary and one other variable.
- 5) At least one graphic that ranks the teams by salaries (payroll).
- 6) Last but not least, choose your own exploratory analysis. Come up with an additional visual display of your choice, and tell us what makes it interesting.
